SENSOR3 TPSR

## DETECT YOUR POWER! CHANGE YOUR POWER! MASTER YOUR POWER!

Sensor3 TPSR App

The Sensor3 TPSR app is the best way for stagehands to protect their hybrid rig, and make sure every fixture gets the correct power delivered to it – whether that's dimmed or switched. Just follow three simple steps to get empowered.
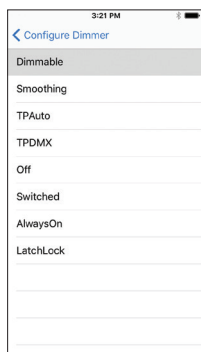

1 SCAN

Open the app and point it at a QR code that's placed on the connector strip or plug box. When connected to a CEM3 over WiFi, the TPSR app will tell users what state the dimmer is in.
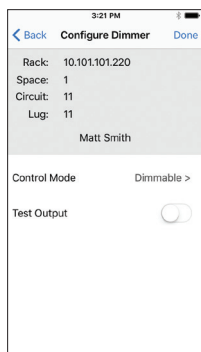

2 SELECT

Select the power mode needed for the circuit – dimmed or switched – right from the app. Now your fixtures are ready to go without needing another person at the dimmer rack or control console.

3 TEST

With the correct power dialed in, plug in the fixture and use the "Test" switch in the app to make sure the circuit is working. The whole process takes just a few seconds and puts power control in the hands of the people who need it.

The free Sensor3 TPSR app from ETC maximizes the usefulness of Sensor ThruPower Modules to keep your rig running right. For more info on the app and for links to download the app for your iOS or Android™ device, visit www.etcconnect.com/Products/Power-Controls/Racks-and-Panels/Sensor3/TPSR.aspx

In order for the app to work, you'll need the latest version of CEM3 software (version 1.6 or later) and have your CEM3 connected to a wireless access point. You can find instructions for updating your CEM3 software at www.etcconnect.com/Support/Articles/CEM3-Power-Control.aspx

ETC Privacy Policy for Sensor3 TPSR App: ETC does not collect, store, or share any personal data as a result of a user downloading and/or using the Sensor3 TPSR app.
